# CCS Software Update Utility

The CCS Software Update Utility automatically checks the CCS website and lets the customer know if there is a new version of the CCS C Compiler. If a new version is available, it downloads and installs the latest version keeping the customer's software up-to-date. The utility includes advanced features such as crash recovery, pause/resume, and archiving of old versions.

Skills used:

- Delphi
- WinINet
- HTTP
- XML

Project Accomplishments

- Provided users an easy way to say current with the latest versions of CCS software reducing technical support requests and increasing customer satisfaction.

- Provided marketing and sales a method of displaying customer targeted advertisements while updates are downloading.

- Encouraged customers to purchase maintenance packages to continue using the update utility.
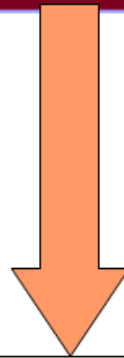

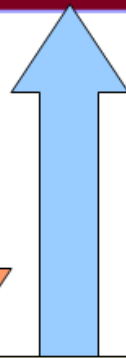

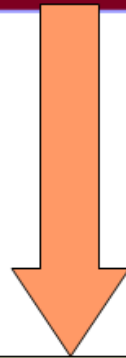

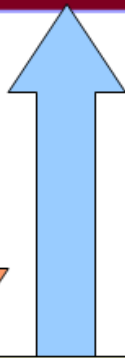

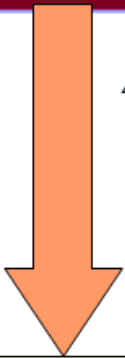

CCS Software Update Utility

Request Customer Download Rights	Request Current Version Numbers	Request Advertisements	Request Download Of Selected Products

Return XML Products List	Return XML Product Version List	Return XML List of Advertisements	Return Application Install Files
