Custom Computer Services Website Improvements

I have made several modifications to the company web site to provide a better customer experience. The website was based on osCommerce and is written in PHP and JavaScript with a MySQL database.

• Added side bar selection to make it easy for a customer to select a primary product option within a product line.

• Added a form for secondary options based on the primary option selected. Takes into account what options are available based on what the user selects.

• Modified an administrator interface to allow sales to determine what options are available for specific products.
